Subject: RE: Potable water data request

Brian,

We have 4 wells and only 2 producing water. The total gallons produced in 2015 was 61,258,720. Daily average would be 167,832 gallons. We have no sewer it is all septic.

Subject: Potable water data request

Mr. Light,

Cascadia Consulting Group is conducting a greenhouse gas inventory for Snohomish County. Part of this project involves collecting data on potable water and wastewater. I was hoping you could answer a few quick questions.

1. After a brief phone call with your public works department, I was told the city relies on septic water and has no central wastewater treatment, is this correct?
2. I was also told all potable water was produced through a centralized well system, is this correct?
3. What was the quantity of water (gallons) produced by the City of Gold Bar in 2015 either as a daily average or across the entire year?

Thank you for your help, and please do not hesitate to contact me if you have any questions.

Kind regards,

Brian Harmon
